## Digital photography group

Free photo editing software listing found here ...

<http://graphicssoft.about.com/od/pixelbasedwin/tp/freephotoedw.htm>

My favourites are:

- Picasa <http://picasa.google.com/>
- Paint.net <http://www.getpaint.net/>
- Photoscape <http://www.photoscape.org/ps/main/download.php>
- Gimp <http://www.gimp.org/>

Here is an unusual, free software, that allows multiple images to be stacked, or overlaid, in order to sharpen the image. It is particularly aimed at astronomy.

- Registax <http://www.astronomie.be/registax/index.html>

Each software package has its own attributes and ease/difficulty of use. I would suggest trialling them after reading the reviews that may expose some attribute that you may be looking for.
